

# QED

QUANTUM ENERGY DYNAMICS

*Dedicated to Humanity  
and all living creatures*

Special thanks to Grant Tulloch of AnudderWorld for helping  
to eliminate **me** prior to writing this paper.

“YOU NEVER CHANGE THINGS BY  
FIGHTING THE EXISTING REALITY.  
TO CHANGE SOMETHING, BUILD A  
NEW MODEL THAT MAKES THE  
EXISTING MODEL OBSOLETE.”

- BUCKMINSTER FULLER

and that's what we're doing...

Beatus Qui Tendi Symphonia

*Blessed are they who tend to the Celestial Harmony*

"If you wish to understand the  
Universe, think of energy,  
frequency and vibration."  
~ Nikola Tesla

Everything is Energy.  
Everything has resonant Frequencies.  
And everything is in a state of Vibration.  
~ QED

*Try your telepathy, Send your Grace  
It's all Vibratory, You'll engage!*

# PREFACE

By Michael Goebel 24th February 2018

Having had a keen interest in science since the age of seven, I have had the benefit of a wide variety of studies. I have worked and contracted for very small companies through to the very large in RF and audio electronics engineering, systems analysis, dimensional analysis, technical writing, graphic design, university lecturing in IT, business consulting, medical research, network engineering, webmastering and several other occupations.

Throughout ALL these subjects and activities, the singular aspect that has always come to the forefront of my attention is that of ENERGY.

Over the decades, I have felt a need to define this quantity in a way that “unifies” the observations I have made of it throughout all the above-mentioned disciplines:

**Energy represents the capacity for CHANGE.**

**The different forms of energy effect changes in their respective dimensions.**

Thus, thermal energy causes changes in temperature, electrical energy causes a change in current or voltage, mechanical energy causes change of location or velocity, chemical energy causes changes in substance and so on.

Whether we look outwards to the gargantuan objects in this vast universe, around us to the everyday considerations of life or inwards to the smallest conceivable sub-atomic particles, energy is always there as a parameter deserving contemplation.

But of ALL forms of energy, there is ONE form that has taken precedence in the minds of the vastly greater majority of humankind - and that form is MONEY - the peoples standard medium of energy exchange.

In the interests of “progress” and continued “economic growth”, our collective attention has been shifted away from the purely energetic to the purely financial and our world, as well as our lives, are being impacted in ways that were unimaginable just a few short decades ago.

## **PREFACE - continued**

Having almost never experienced a shortage of money has allowed me to focus on matters of interest to me and I have devoted large blocks of my time over the last half a century and more to a wide variety of studies, resulting in a “way of looking at things” that has brought me unimaginable Joy - a Joy which I feel I not only **MUST** share, but desire to with every fiber of my being.

Encapsulation of all the magical insights, miraculous experiences and assorted unbelievable phenomena that have been my absolute delight to witness has been an ongoing pursuit throughout this life and the reason I have settled on Reality Engineering as the chosen profession.

What the **HECK** is “Reality Engineering?!”, you may ask.

Can you conceive of making constant use of tools that can be proven not to exist ?

Or learning from your mistakes **BEFORE** you make them ?

Or the thrill of seeing your outside world change dynamically in accordance with changes in your cognitive framework ?

How about having access to a model of creation that allows you to make sense of and even troubleshoot **ANY** situation ?

Or having the ability to manifest any desire if you choose to ?

Perhaps the concept of control of the most powerful form of energy in the Universe might interest you ?

These are just a few of the skills that come with the practice of Reality Engineering - and as wild, “out there” and unbelievable as they may sound at first, the remainder of this paper is devoted to proving that not only are they real but that **ANYONE** can learn them, regardless of education, income, position, religion or location.

I invite you to come with me on the most exciting journey of your life - the discovery of your true power, your true identity and **YOUR TRUE PURPOSE.**

# Prolegomenon

Humankind makes use of available energy in many forms to exercise its collective will.

Of all the available energy forms, none is more ubiquitous than that of electrical power. This is due to the ease in which it may be generated, transmitted, distributed, accessed and transduced into other forms such as mechanical, magnetic, sonic, photonic, chemical and thermal energies, to name a few. This, combined with the fact of its potency, make it the best carrier of energy.

Due to the prodigious effort that has gone into advancement of electronic technologies, a very important consideration of energy has come to light - the aspect of energy transfer. Findings in this area have led to the inception of a new energy science called

## Quantum Energy Dynamics - (QED)

==the study of how **energy is deployed**==

The use of energy on this planet is multifaceted and complex, with exceedingly few organisations and/or individuals working in this field.

As will be demonstrated in this document, the efficiency of attainment of some result, in at least three primary areas of physics (electrical, mechanical and magnetic), is DEFINED in virtually every textbook, website and database on the planet as being only 50% of what is potentially possible. It is also conceivable that similar errors exist in the other areas of thermodynamics, photonics and chemical substance.

This is due to losses having their origin in Newtons Third Law of Action and Reaction (otherwise referred to as The Law of Equilibrium).

Whenever energy is used to *resistively* initiate some process, such as the charging of a capacitor, the accelerating of an object or the creation of a magnetic field, a 50% loss in transfer of energy from source to destination inevitably takes place due to the reactionary forces being returned from destination to source.

**By REACTIVELY applying the energy in the same situation, this 50% loss can be circumvented - with the end result being only 50% of the energy is now required to perform the same task.**

The implications of the discovery of this new science are positively staggering and will lead to a new era of technological advancement and a bright, new future for humankind, sought since the beginning of time..

Due to the enormity of the scope of this matter, it is suggested that you read this paper once initially and sometime later at a second sitting, then at a third.

*If your mind has not been “blown”, you have not understood it.*

# Prolegomenon - continued

Far from being an obscure, “specialist” science, QED has application in ALL areas of human endeavour. This is due to the fact that everything, in its ultimate analysis, can be seen to be energy. Everything IS energy and has come into creation to change how energy is transformed. The findings of QED are just as applicable to business, finance, education, politics, all kinds of human trade, all the other sciences and even that of human relationships and interaction.

*“In the end, the answer will be seen to have been in the approach.”*

An understanding of QED shows us us that we have been labouring under the weight of misconceptions, misunderstandings and misinformation virtually since time began.

We tend to approach problems with only a surface-level of understanding about the nature of the problem. We tend to “throw” money or energy at it and, in doing so, waste an incredible amount of effort.

On reflection, it becomes obvious just how widespread this problem actually is and how it creeps into every one of our activities because everything IS energy, then everything that we do - and indeed, everything that HAPPENS is an exchange of energy.

It has been determined that the average citizen of Australia is responsible for the consumption of over 170 kilowatt-hours of energy *per day*<sup>1</sup> and uses around 40-50 kilowatt-hours of that JUST in domestic activities. To put this number in perspective, 1 kWhr is about 1.3 times the energy a horse can deliver over a one hour period.

This means that each of us is, on average, responsible for the consumption of roughly 50-60 horsepower-hours per DAY.

Because this energy is supplied and consumed in the form of electricity, we cannot SEE the enormity of its quantity and therefore tend to ignore it, simply go on with our activities and pay when the bill arrives - without a single thought as to how much of it has been wasted, simply gone up in smoke for want of a moment’s consideration.

When QED techniques become part of standard education and its principles adopted throughout the entire gamut of modern technology, we will find we have more than enough energy to achieve what we want and the crushing need to destroy our planet in the name of energy “growth” will be a thing of the past.

The following pages illustrate how QED reveals and addresses the problem of the 50% wastage in three primary areas of physics - electronics, mechanics and magnetism.
